8			

An actual and present controversy exists concerning the legal rights and duties of Macrovision and GI with respect to the GI License. Macrovision contends that the agreement has terminated and that GI is no longer a valid licensee, and has sued Motorola based on GI's continued production and sale of STBs. GI contends that the GI License remains binding and enforceable such that GI is a valid licensee. Moreover, GI contends that even if the GI License is terminated by reason of expiration of the original patents, GI continues to enjoy the right to use Macrovision anti-copying technology in its STBs pursuant to the terms of the GI License.

A declaratory judgment in this case is necessary and proper as such a judgment would clarify the parties' rights and obligations under the GI License, and eliminate the uncertainty that has been generated with respect to the parties' rights and obligations under the

Accordingly, GI requests that this court make a judicial declaration that (1) the GI License is binding and enforceable; or alternatively (2) to the extent the GI License has terminated by reason of expiration of certain Macrovision patents, GI retains the right to

GI incorporates the allegations of paragraphs 1-148 as if fully set forth herein.

Patents") disclose, among other things, the insertion of pseudo-sync pulses in video signals to disrupt automatic gain circuitry, the modification of color bursts in video signals to disrupt color correction circuitry, the insertion of back porch pulses to disrupt automatic gain circuitry, and

sync amplitude reduction to enhance video copy protection (collectively "Macrovision Copy Protection Technology"). The GI License confers rights in certain of Macrovision's Base Patents forming the core of the Macrovision Copy Protection Technology.

- 151. The Patents now asserted by Macrovision disclose mere minor improvements to the Macrovision Copy Protection Technology embodied in the Base Patents, yet Macrovision now seeks to expand the scope of those Patents now asserted to extract exorbitant royalties, many times greater than that justified by its mere improvements; in effect, extending the terms of the Base Patents impermissibly beyond their statutory expiration, and impermissibly extending the scope of the Patents now asserted.
- 152. Each of Macrovision's Base Patents have expired and, accordingly, GI is free to practice those techniques disclosed by the Base Patents without license or royalty to Macrovision.
- 153. Macrovision now seeks to prevent GI's free use of the Macrovision Copy

 Protection Technology disclosed by the Base Patents. Macrovision also seeks to extract royalties as if the Base Patents were still in effect.
- 154. GI is entitled to a judicial declaration that Macrovision has engaged in patent misuse, and therefore that Macrovision is not, among other things, entitled to seek royalties against GI under any applicable agreement and/or patents.

WHEREFORE, GI prays for the following relief:

- A declaratory judgment that the '132 patent be declared invalid, void and/or unenforceable;
 - B. A declaratory judgment that GI be declared not to have infringed the '132 patent;

ı	
1	Macrovision patents, GI retains the right to incorporate Macrovision's anti-copying technology
2	into GI STBs.
3 4 5	R. A declaratory judgment that Macrovision be declared to have engaged in patent misuse, and therefore that Macrovision is not, among other things, entitled to seek royalties against GI under any applicable agreement and/or patents;

Attorney for Plaintiff
GENERAL INSTRUMENT
CORPORATION

* Counsel seeking admission pro hac vice.

25

Plaintiff General Instrument Corporation for its claims against Defendant Macrovision Corporation, states and alleges as follows:

NATURE AND BASIS OF ACTION

- 1. This is an action for Declaratory Judgment under 28 U.S.C. §§ 2201, et seq., and under the laws of the United States concerning actions related to patents under 28 U.S.C. § 1338(a), arising from an actual controversy between the parties with regard to the invalidity, unenforceability, and noninfringement of certain patents. In addition, GI seeks declaratory relief arising from an actual controversy between GI and Macrovision concerning the parties' rights and responsibilities under a license agreement.
- Plaintiff General Instrument Corporation, d/b/a Home & Networks Mobility, a wholly-owned subsidiary of Motorola, Inc. ("GI"), is a Delaware corporation, with its principal place of business at 101 Tournament Drive, Horsham, Pennsylvania, 19044.
- Defendant Macrovision Corporation is a Delaware Corporation with, upon information and belief, its principal place of business in Santa Clara, California.

JURISDICTION AND VENUE

- 4. This Court has subject matter jurisdiction in accordance with 28 U.S.C. §§ 2201 and 2202 and, under the laws of the United States concerning actions relating to patents, 28 U.S.C. § 1338(a).
- 5. This Court has personal jurisdiction over Macrovision because Macrovision's principal place of business is Santa Clara, California and it has had an office of business in San Francisco, California at all relevant times.

26

27 28 15.

technology. GI License § 2.1(b); see also Ex. 2 § 6 ("1994 Amendment") (amending GI License § 2.1).

- 13. The anticopying technology licensed to GI under the GI License was embodied in three U.S. patents and foreign equivalents (defined in Section 1.5 of the GI License as the "Patents") plus other rights.
- 14. In consideration for the anticopying technology licenses, GI agreed to pay an upfront fee of two hundred thousand dollars (\$200,000), and a fee of twenty-five thousand dollars (\$25,000) for every cable operator that makes commercial use of the licensed anticopying technology. GI License § 4.1.
- GI was one of the first if not the first substantial customer and licensee of Macrovision technology. The GI License was thus instrumental in introducing Macrovision to the market. GI essentially vouched for Macrovision in its competition for market share with the Eidak Corporation, which also offered anticopying technology that rendered television signals difficult if not impossible to playback from VCRs.
- 16. The GI License, devoid of a per STB royalty fee, recognized GI's position as the first mover of Macrovision's anticopying technology. GI even received a certain share Macrovision's future business. See GI License §§ 7.1, 7.2.
- 17. The expectation of the parties to the GI License was beyond question that GI was to enjoy a per STB royalty-free license.
- 18. This expectation of a per-STB royalty-free license was again confirmed in February 1994, when the GI License was amended (the "1994 Amendment") (attached hereto as Exhibit 2), as the 1994 Amendment is also devoid of a per STB royalty fee.

- As a result of the GI License and the 1994 Amendment, Macrovision never charged GI a per STB royalty fee.
- 20. In addition to again confirming the expectation of the parties regarding the lack of a per STB royalty fee, the 1994 Amendment broadened the GI License so that Macrovision's licensed anticopying technology would include the Patents plus "any improvements made available by Macrovision." 1994 Amendment § 1; see also G.I. License § 1.1.
- 21. By broadening the scope of the licensed anticopying technology, GI and Macrovision demonstrated their intent that the GI License would outlive the expiration of the patents that were initially listed in the GI License.
- 22. GI has performed, and continues to perform, each and every condition, covenant, and obligation to be performed on its part, pursuant to the terms of the GI License and the 1994 Amendment, except as waived or excused by Macrovision.

MOTOROLA AND MACROVISION: CONTRACTUAL RELATIONSHIP

- 23. In September 1998, Motorola, Inc. ("Motorola"), through its business unit located in Austin, Texas, entered into a license agreement (the "Motorola License") for Macrovision's anticopying technology that called for a sixty (60) cent per STB royalty fee.
- 24. At the time Motorola entered into the Motorola License, Motorola first entered the STB market.
- 25. Motorola's entry into the STB market proved to be short-lived; Motorola withdrew from this market in early 2001, after the production of fewer that one hundred thousand (100,000) STBs.
- 26. In 2004, Motorola's semiconductor group located in Austin, Texas was sold by Motorola to Freescale, Inc.

- GI was not and is not a party to the Motorola License; Motorola did not even acquire GI (by way of a stock purchase agreement) until January 2000, two years after the
- Macrovision has admitted that GI "is in no way covered by" the Motorola License and until 2007, never attempted to charge GI a sixty (60) cent per STB royalty fee pursuant to

GI HAS THE RIGHT TO INCORPORATE MACROVISION'S ANTICOPYING TECHNOLOGY IN ITS STBs

- GI has the right to manufacture, sell and distribute STBs with chipsets containing Macrovision's anticopying technology. Accordingly, historically, Macrovision never contested GI's right to manufacture or distribute STBs containing such chipsets.
- For example, in August 2006, some confusion arose between Macrovision, Motorola, and GI when Macrovision contacted Motorola about a twenty-five thousand dollar (\$25,000) payment due to Macrovision from GI under the GI License. See Ex. 3 at 1 (Sept. 5,
- Macrovision, recognizing that the GI License was in full force and controlled GI's sales of STBs with chipsets containing its anticopying technology, informed Motorola and GI that the payment was due under "Sections 4.1b and 4.1c" of the 1991 Agreement between "GI and Macrovision." Id. GI acknowledged the contract, and made the \$25,000 payment.
- At the same time, Macrovision was demanding per STB royalty fees under the
- In order to prevent further confusion between the parties, Motorola asked Macrovision to "identify Macrovision's position with regard to the licenses" held by Motorola

 and its subsidiaries, including the GI License and the Motorola License. Ex. 4 at 2 (Oct. 4, 2006 email from J. Silverio to B. Gilham).

- 34. Macrovision responded that the parties could resolve the "confusion" between the GI License and the Motorola License by agreeing to either (1) "terminate the old GI agreement and use the more recent [Motorola] agreement ('98)" or (2) terminate both and "put together a more applicable agreement." Ex. 4 at 1 (Oct. 4, 2006 email from B. Gilham to J. Silverio).
- 35. Accordingly, Macrovision again confirmed that the GI License was in full force and controlled GI's sales of STBs with chipsets containing its anticopying technology.
- 36. On March 13, 2007, Macrovision informed Motorola of its view that the base patents embodied in the Motorola License (including those embodied in the GI License) would expire in May 2007. However, Macrovision fully explained for the first time its position that Motorola would need a new license for seven (subsequently increased to eight) improvement patents under the Motorola License. In total, Macrovision has stated that Motorola needs to license (or otherwise be infringing) Patents No. 5,315,448 ("448 Patent"), 5,583,936 ("936 Patent"), 6,381,747 B1 ("'747 Patent"), 6,516,132 B1 ("'132 Patent"), 6,836,549 ("'549 Patent"), 7,050,698 ("'698 Patent"), 7,085,380 ("'380 Patent"), and 6,501,842 ("'842 Patent"). However, Macrovision did not assert that GI's STBs were covered by the Motorola License. Rather, Macrovision expected to negotiate a new license and that "all STBs that were once controlled under the GI License and have been shipped under no license agreement since its expiration, would fall under this new ('07) agreement." Ex. 5 (Mar. 13, 2007 email from B. Gilham to J. Silverio).
- 37. On May 30, 2007, Macrovision informed Motorola that it was prepared to send a formal notice of breach of contract under the Motorola License, *based on the sales of GI STBs*

 39.

40.

 with chipsets containing Macrovision's anticopying technology. Ex. 6 (May 30, 2007 email from B. Gilham to J. Silverio).

38. On June 26, 2007, Macrovision changed direction again and, by way of its outside counsel, informed GI that it was not covered by the Motorola License. Ex. 7 (June 26, 2007 letter from C. Morrow to B. North) (The Motorola License only covers Motorola's subsidiaries that "at the time of the agreement, were under ownership or control by Motorola Since Motorola did not acquire General Instruments until January 2000, General Instrument is in no way covered by the Motorola License."). Therefore, Macrovision alleged that "all manufacture, use, or sale" of GI STBs with chipsets containing Macrovision's anticopying technology is unlicensed. Id.

contemporaneous statements – are incorrect. GI has a current right under § 2 of the GI License, as amended, to, among other things, "manufacture, sell, and distribute" STBs with chipsets containing Macrovision's anticopying technology. GI License § 2.1(b); see 1994 Amendment §§ 1, 6. Specifically, the GI License does not expire until the termination of the Patents which embody the "Process." Pursuant to the 1994 Amendment, the "Process" not only includes the original "Patents," but also "any improvements made available by Macrovision." Id. § 1.

Macrovision's recent claims of infringement - contradicting several

Moreover, without conceding that the GI License has in fact terminated, even if it

were terminated, the terms of the GI License and the 1994 Amendment refute Macrovision's contention that GI has no rights post-termination of the GI License. See GI License §§ 1.1, 13.5, 13.7(b); 1994 Amendment § 1. As a result, GI has a license – express and implied – to manufacture, sell and distribute STBs with chipsets containing Macrovision's anticopying technology.
